### Wire Granulator

MAKE MG

MODEL 380 VZT

Notes: 125 HP

Production: 1500-2650 lbs input per hour

Weight: 10,600 lbs

The MG 380 VZT is a complete technological and patented system for the recycling of copper and aluminum wire, radiators, and electronic board. Thanks to its unique ZIG ZAG – TURBO system, the VZT series can automatically separate the thick and rigid wire from the household and fine one through two different slides. The MG 380 VZT also is equipped with a Turbo for the finer hair wire and car harness and no additional charge. The Turbo is designed to separate the fine hair wire and car harness without reducing screen size in the granulator. The ZIGZAG systems takes the heavy gauge wire and separates the insulation from the wire before it goes to the separation table. This system can also be purchased with a 800 series Tritonic Pre-Shredder and loading conveyor.
